

Fully integrated global forwarding solution for air, sea and road

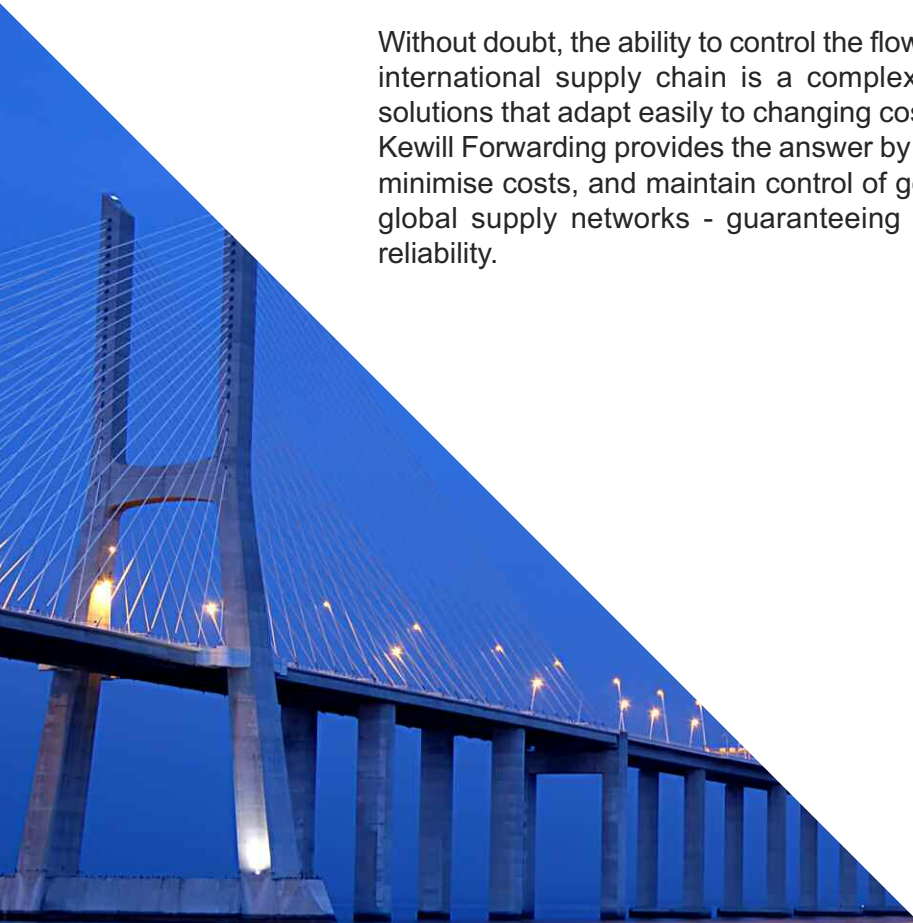

More for less. It's a common customer expectation nowadays and no industry or organisation is exempt. Facing ever-more demanding customers with ever-more detailed requirements, Logistics Service Providers (LSPs) are feeling the pressure to lower costs - yet speed delivery - just like everyone else.

In response, shrewd organisations are streamlining and automating processes to ensure lean supply chains and rapid operations. However, more must be done if future success is to be secured.

Transparency at every stage of the execution chain from order to final delivery is crucial. With numerous parties often involved in a single transaction, 'track and trace' functionality is no longer an optional extra it is a mandatory business requirement. End-to-end visibility is also essential for accurate cost capture, job costing and profit sharing purposes.

Kewill Forwarding provides LSPs with an integrated global freight forwarding solution that automates international services by air, sea and road. This cost-effective tool enhances collaboration between customers, agents and carriers, minimises transaction costs, and improves visibility and control of goods throughout the entire export/import process.

Without doubt, the ability to control the flow of goods and information throughout the international supply chain is a complex process. It requires flexible, scalable solutions that adapt easily to changing cost, regulatory, and delivery requirements. Kewill Forwarding provides the answer by helping LSPs accelerate time to delivery, minimise costs, and maintain control of goods throughout even the most complex global supply networks - guaranteeing the highest levels of performance and reliability.

Checklist of key features

- Unlimited, variable multi-level company structure
- Individual, customisable service plan functionality
- Automated alert and work flow management
- Integrated quotation system
- Highly configurable e-portal
- Multimodal tracking and tracing system
- Support for multiple languages, time zones, currencies and measurements
- Sophisticated security and access control
- Job costing and profit share visibility
- Integrated billing and payment registration

Checklist of key business benefits

- Streamlined, automated processes
- Enhanced supply chain visibility
- Online KPI measurement
- Improved collaboration
- Integrated planning, control and execution
- Increased productivity and efficiency
- Improved customer service
