

# Kewill Logistics

**A fully integrated solution bringing flexibility and visibility to the entire logistics process**

Is your business ready to step up into another league? With competition keen, it's easy for your customers to move their business if you don't keep up with the latest industry trends. In a bid to succeed, smart logistics service providers are looking for ways to streamline their operations, become more agile and differentiate their customer service. Would your organisation benefit from an innovative solution that helps move you on to a new level of effectiveness?

## Business benefits

- Increased productivity and efficiency
- Improved customer service
- Increased responsiveness and agility
- Improved cash flow
- Better control
- Increased margins
- Competitive advantage when approaching new customers
- Access to proven Kewill expertise and experience
- Rapid implementation
- Scalable to meet future business needs.

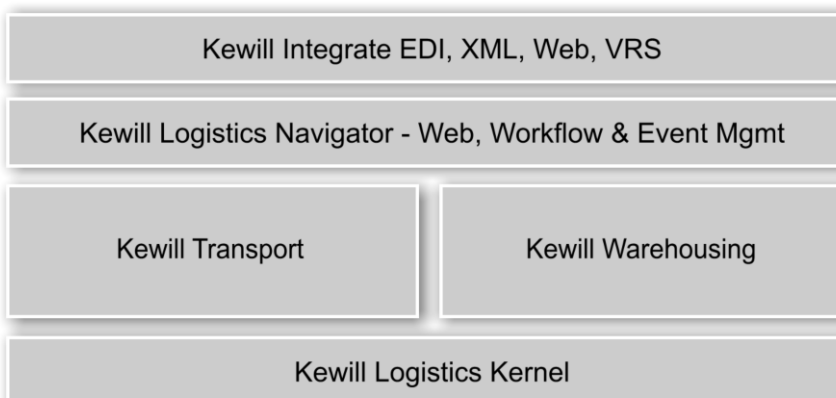

Consistent processes throughout your business make it easier to switch staff between customers and warehouses to meet changing levels of demand. But, to gain swift access to the right stock - in the right place, capture costs more accurately and provide your customers with the level of service they demand, you also need to gain transparency every step of the way. A clear view of the closest stock to the required delivery point, 24 hours a day, 7 days a week, not only improves the service you offer your customers, it also reduces the distance goods travel, keeping your costs down and benefiting the environment.

Success lies in integrating your operations to enable higher levels of efficiency, real-time visibility of your processes and the end-to-end control that reduces your exposure to un-detected, un-managed exceptions to plan. Kewill Logistics offers an innovative solution that can transform your business in this way.

## Kewill Logistics: Introducing agility and clarity

Designed with the entire supply chain clearly in mind, Kewill Logistics is a powerful, easy-to-use solution that provides all the functionality you need to run a logistics service plus much more besides.

By integrating with your enterprise applications and, where appropriate, the back-office applications of your customers, partners and sub-contractors, it allows you to capture and share vital data from all points, turning your business into a transparent enterprise, where everyone receives the information, alerts and notifications they need. This transparency enables people to take a proactive approach to unfolding events, helping prevent process exceptions from becoming business problems that trigger financial penalties.

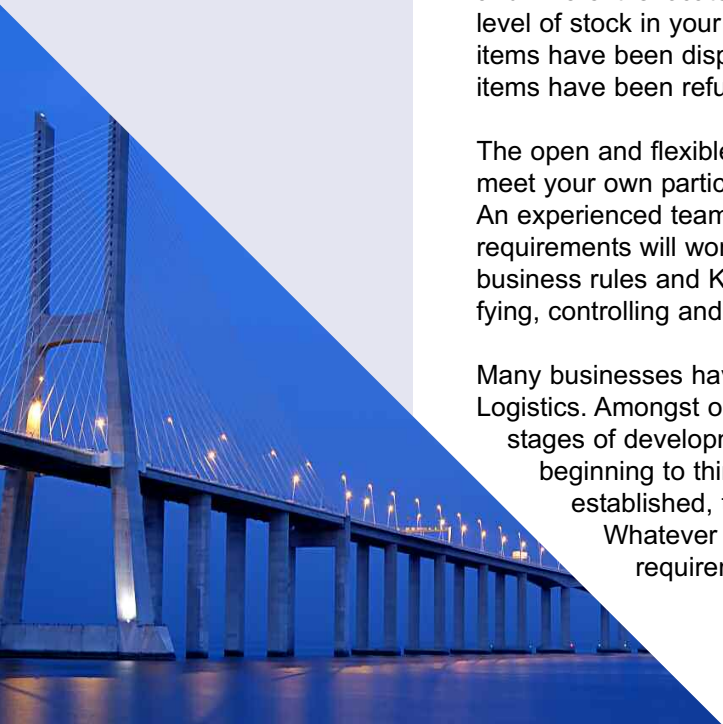

Imagine the benefits that continual access to accurate stock information and reporting would bring to your business. You would always know exactly what stock is available and where it is located. And Kewill Logistics goes much further than showing you the level of stock in your warehouses. You can access information such as how many items have been dispatched, where they are in your transport process, how many items have been refused and returned, all in near real-time.

The open and flexible framework on which Kewill Logistics is based can be tailored to meet your own particular needs and the individual needs of each of your customers. An experienced team from Kewill Professional Services skilled in assessing exact requirements will work with you right from the start, examining the unique workflows, business rules and KPIs behind your processes in order to set up the monitoring, notifying, controlling and measuring that your business needs.

Many businesses have already benefited from the scalability inherent in Kewill Logistics. Amongst our existing customers we have organisations of all sizes and at all stages of development. So, whether you are a small logistics service provider just beginning to think about expanding your facilities, or are already large and well established, this feature-rich solution can scale and change with you.

Whatever your current situation or plans, we can continue to meet your requirements into the future.

## Personalised customer service

Specifically developed for all the activities generated by a multi-customer logistics service provider dealing with a variety of goods, Kewill Logistics can help you respond to individual requirements, no matter how diverse. A pricing structure can be put in place based on the type of activity carried out for each customer. Even the most complicated distribution scenarios can be deployed with ease.

If you or your customers want to improve order fulfilment levels and reduce order cycle times using the latest technology such as truck-based computers and planning systems, RF- or voice-controlled warehouse operations, that's possible too.

And, as a web-based solution, your customers - whether small, medium or large organisations - have easy access to order entry and the information they need online. A PC and Internet access is all they need to log on to a browser with a user name and password. Customers can even choose to receive pro-active alerts in a range of formats such as email, SMS or EDI messages.

## Reduced costs, increased efficiency, improved margins

This flexible solution from Kewill provides a comprehensive tool-set that helps manage and control the variables associated with operating a logistics service. From defining business processes to monitoring service level agreements, from optimising stock put-away to utilising transport capacity, it's all covered.

Kewill Logistics is a true multi-country, multi-language, multi-currency, multi-warehouse, multi-hub and spoke, multi-company system, offering you the flexibility to optimise inter-company planning and settle financial arrangements between separate organisational units. All while staying focussed on maximising efficiency and minimising costs.

If handling a large number of sub-contractors or staff based in different geographies causes you problems from a financial perspective, Kewill Logistics has tools to help. By minimising the amount of effort needed to manage different tariffs and charge rates, customers can be invoiced more quickly and accurately, improving your cash flow and profitability.

## Access to Kewill expertise and experience

As a Kewill Logistics' customer, you are allocated a Kewill Professional Services team, chosen to offer a breadth and depth of expertise to suit your particular needs. With experts in a wide range of specialist sectors such as automotive, medical, food or dangerous goods your team is sure to provide the right mix of project management, business and technical skills to help recognise and address your business challenges while quickly understanding how to integrate Kewill Logistics with your back office systems to ensure seamless processing.

With many years of experience, Kewill is well qualified to advise you on best practice. Our consultants will examine every touch point in your processes and bring together the people affected from right across your business, making sure that your Kewill Logistics solution is developed to meet their requirements in the most effective way. As an international company, Kewill is also well placed to deal with multi-national environments and advise on the most cost-effective way to deal with customs issues. Every element of your business, wherever it is located, can be part of a single Kewill Logistics solution with a multi-language environment.

The Kewill Logistics solution is quick and easy to set up and it's simple to add new customers as they come along, whatever software they use. However, if you prefer, the Kewill Community Development Team is on hand to assist with implementation, providing training and rolling out the solution to all your partners and customers, whether large or small.

With a host of optional service modules and fully integrated, best of breed solutions covering compliance, customs, freight forwarding, fulfilment, visibility and integration, you can pick and choose options to meet your entire needs.

## Right stock, right place, right time

In the struggle to respond to ever more complex demands, Kewill Logistics sets you apart from the competition. Through improved integration with your business partners, better visibility of stock and enhanced business agility you can respond more quickly and effectively to customer needs. And by providing your customers with access to the step-by-step progress of their orders, you are not only offering them valuable practical information, you are increasing the trust they have in your business, ensuring a clear competitive advantage for the future.
