

Enterprise Shipping Solutions

Kewill Ship™

Kewill Ship is an enterprise multi-carrier shipping system designed to be integrated into automated, high-volume warehouse environments.

Kewill Ship is a workflow-based solution that can be leveraged anywhere in the process from order entry through shipping, track and trace, to delivery status and validation.

Kewill Ship allows organizations to maximize cost savings by leveraging carrier selection with a multi-carrier rating engine. Seamless integration with existing IT investments allows streamlining of fulfillment processes and provides complete shipment visibility across the enterprise.

Core Capabilities

Enterprise-wide Shipping Automation

- o Submit shipments via a common browser from any enterprise location
- o Provide virtual storefronts for securing orders without limiting your ability to distribute from multiple locations and suppliers
- o Gain more flexibility and control over systems maintenance with centralized system administration
- o Integration of shipping and rating functionality into COM-compatible applications without the burden of maintaining frequent carrier rate and methodology changes

Multi-Carrier Compliance

Automate shipping with all major carriers including UPS, FedEx, US Postal Service, LTLs & generic carriers

- o Streamline your shipping process for all major carriers and LTLs
- o Generate extensive shipment and labor savings
- o Generate compliance labels, forms, manifests and reports
- o Integrate with other business applications to eliminate inefficiencies
- o Transmit electronic manifests to reduce paperwork and simplify billing
- o Maintain one consignee list and one history file for all shipments for easy tracking and analysis

Rate Shopping

To get the best carrier rates and services, you need to shop around. Kewill Ship considers more than just shipping rates, it can also analyze a combination of factors, thereby minimizing costs and improving services

- o Compare rates across carriers to generate extensive shipment savings
- o Analyze a combination of factors including rates with special service fees, days-in-transit, weight ranges, user-defined destination ZIPs and carrier performance rating, and consolidated-multiple and standard-multiple pricing

LTL/Generic Carriers

Replace independent Less Than Load (LTL) software programs with one system that automates them all. Define carriers in addition to those already supported including custom, local, regional and LTL carriers.

- o Maintain one database, on consignee list, and one history file for all shipments
- o Define rate tables for domestic and international shipments
- o Rate shop across LTLs and non-LTLs including multiple classes within a shipment
- o Impose various rate discount methods

Printing Solutions and Reporting

Turn raw shipping data into useful management information. Generate an array of carrier-compliant and custom forms, labels and reports.

- o Print carrier-required documents such as manifest reports, compliance labels, waybills, and export documents
- o Print invoices, custom reports and forms
- o Centralized data allows management of information to automate the shipping process and properly monitor shipping activity, analyze costs, and identify future trends.

Integration with other Business Applications

Link your shipping department to other applications to exchange valuable shipping information. Import consignee address information. Export data such as tracking numbers and shipping charges.

- o Automate your entire shipping process
- o Eliminate repetitive data entry and reduce errors
- o Improve customer service
- o Simplify and improve accounting
- o Integration of shipping and rating functionality into a COM-compatible application without the burden of maintaining frequent rate and methodology changes.
