

Kewill Warehousing

A fully integrated solution bringing flexibility and transparency to the warehousing process

Are global, just-in-time supply chains, goods with varied, sometimes complex storage and picking requirements plus rising warehousing costs making your warehouse management systems creak at the seams? Do you feel hampered by the number of manual processes that still exist in your organisation? Is a lack of systems integration with your transport partners wasting people's time? Perhaps you struggle to provide all the different reporting requirements? And with several organisations involved in a single transaction, often in distant geographic locations, you may lack essential "track and trace" functionality.

Business benefits

- Increased productivity and efficiency
- Improved customer service
- Reduced costs
- Improved cash flow
- Increased responsiveness and agility
- Better control
- Competitive advantage
- Access to Kewill expertise and experience
- Rapid implementation.

To keep pace with modern supply chains, the most competitive organisations are looking for ways to streamline and automate processes. But, to gain swift access to the right stock - in the right place, capture costs more accurately and provide your customers with the level of service they demand, you also need to gain transparency every step of the way. Plus, with a clear view of the closest stock to the required delivery point, 24 hours a day, 7 days a week, you also reduce the distance goods travel, not only keeping your costs down, but also benefiting the environment.

Success lies in moving your organisation to a higher level of efficiency, improving real-time visibility of your processes and gaining the end-to-end control that reduces your exposure to undetected, un-managed exceptions to plan. Kewill Warehousing offers an innovative solution that can transform your business in this way, whatever your current size, situation or future plans.

Kewill Warehousing: Introducing agility and clarity

Designed with the entire supply chain clearly in mind, Kewill Warehousing is a key element in Kewill's Global Trade Management suite. A powerful, easy-to-use solution, Kewill Warehousing provides all the functionality you need to run a warehousing operation plus much more besides.

By integrating with your enterprise applications and, where appropriate, the applications of your transport partners, it allows you to capture and share vital data from all points, turning your business into a transparent, real-time enterprise, where everyone receives the information, alerts and notifications they need. This transparency enables people to take a proactive approach to unfolding events, helping prevent process exceptions from becoming business problems.

Imagine the benefits that continual access to accurate stock information and reporting would bring to your business. You would always know exactly what stock is available and where it is located. And Kewill Warehousing goes much further than showing you the level of stock in your warehouses. You can access information such as how many items have been dispatched, how many have been refused and returned, how many returned items are waiting to enter your Quality Assurance process before being returned to stock, all in near real-time.

Kewill Warehousing's open and flexible framework can be tailored to meet your own particular needs and the individual needs of each of your customers. An experienced team from Kewill Professional Services skilled in assessing exact requirements will work with you right from the start, examining the unique workflows, business rules and KPIs behind your processes in order to set up the monitoring, notifying, controlling and measuring that your warehouse needs.

Personalised customer service

Whether you operate a single or multiple stockowner environment, Kewill Warehousing can help you deal with specific requirements, no matter how diverse. A pricing structure can be put in place based on the type of activity carried out for each customer. Even the most complicated distribution scenarios can be deployed with ease.

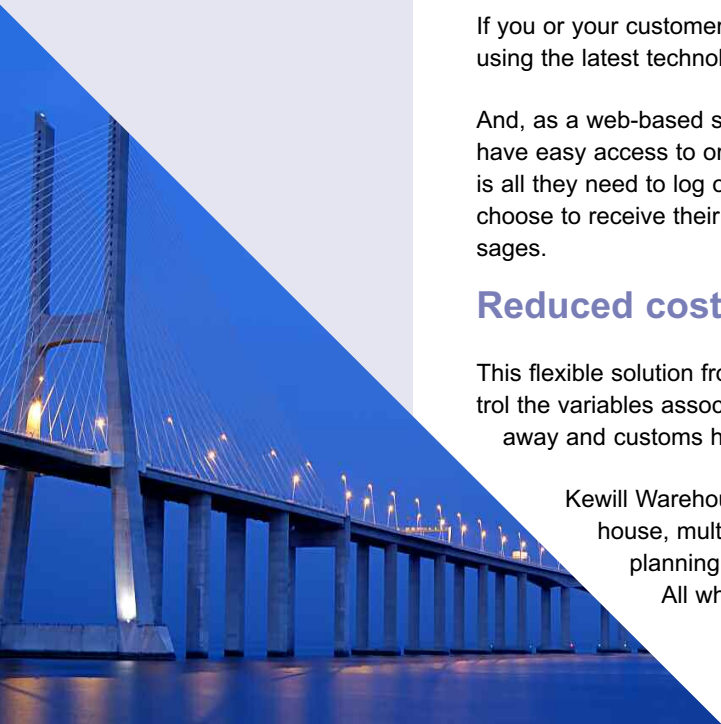

If you or your customers want to improve order fulfilment levels and reduce order cycle times using the latest technology such as RF- or voice-controlled operations, that's possible too.

And, as a web-based solution, your customers - whether small, medium or large organisations - have easy access to order entry and the information they need online. A PC and Internet access is all they need to log on to a browser with a user name and password. Customers can even choose to receive their pro-active alerts in a range of formats such as email, SMS or EDI messages.

Reduced costs, increased efficiency

This flexible solution from Kewill provides a comprehensive tool-set that helps manage and control the variables associated with operating a warehousing business. From optimised stock put-away and customs handling through to backward scheduling, it's all covered.

Kewill Warehousing is a true multi-country, multi-language, multi-currency, multi-warehouse, multi-company system, offering you the flexibility to optimise inter-company planning and settle financial arrangements between separate organisational units. All while staying focussed on maximising efficiency and minimising costs.

If handling a large number of transport companies or staff, based in different parts of the world, causes you problems from a financial perspective, Kewill Warehousing has tools to help. By minimising the amount of effort needed to manage different tariffs and charge rates, customers can be invoiced more quickly and accurately, improving your cash flow and profitability.

Access to Kewill expertise and experience

Every Kewill Warehousing customer is allocated a Kewill Professional Services team, chosen to offer a breadth and depth of expertise to suit your particular needs. With experts in a wide range of specialist sectors such as automotive, medical, food or dangerous goods your team is sure to provide the right mix of project management, business and technical skills to help recognise and address your business challenges while quickly understanding how to integrate Kewill Warehousing with your back office systems to ensure seamless processing.

With many years of experience, Kewill is well qualified to advise you on best practice. Our consultants will examine every touch point in your processes and bring together the people affected from right across your business, making sure that your Kewill Warehousing solution is developed to meet their requirements in the most effective way. As an international company, Kewill is also well placed to deal with multi-national environments and advise on the most cost-effective way to deal with customs issues. Every element of your business, wherever it is located, can be part of a single Kewill Warehousing solution with a multi-language environment.

The Kewill Community Development Team is on hand to assist in setting up, providing training and rolling out the solution to all your transport partners and customers, whether large or small. This allows everyone to remain focussed on core business competencies rather than dedicating resources to managing Kewill Warehousing.

And Kewill Warehousing is just one element of Kewill's Global Trade Management solution suite. Covering compliance, customs, transport, freight forwarding, fulfilment, visibility and integration, you can pick and choose from these fully integrated, best of breed solutions to meet your entire supply network needs.

Right stock, right place, right time

In the struggle to respond to ever more complex demands, Kewill Warehousing sets you apart from the competition. Through improved integration with your transport partners, better visibility of stock and enhanced business agility you can respond more quickly and effectively to customer needs. And by providing your customers with access to the step-by-step progress of their orders and stock availability, you are not only offering them valuable practical information, you are increasing the trust they have in your business, ensuring a clear competitive advantage for the future.
